#### ■ Features

- Charger for lead-acid batteries (flooded, Gel and AGM) and li-ion batteries (lithium iron and lithium manganese)
- Built-in 3 stage programmable charging curve
- · Universal AC input / Full range
- · Built-in active PFC function
- · Fanless design, cooling by free air convection
- Built-in temperature compensation function
- Protection: Short circuit / Over voltage / Over temperature / Battery under voltage / Battery over voltage / Battery reverse polarity protection
- 3 years warranty

## Applications

- · Radio system backup solution
- · Electric scooter charger
- · Surveillance system

## Description

ENC-360 is a single output 360W AC/DC desktop type charger with 3 stage charging curve. In addition to the embedded pre-defined charging curves, the default curve is programmable and thus able to accommodate different types of batteries, such as lead-acid batteries (gel, flooded and AGM) and li-ion batteries (lithium iron and lithium manganese). With the rugged mechanical design along with the high efficiency circuitry, ENC-360 operates for the ambient temperature range -30~+70°C under free air convection.

- 3. This is the range when programming Vboost or Vfloat by using SBP-001, the smart battery charging programmer.
- 4. This is MEAN WELL's suggested range. Please consult your battery manufacturer for their suggestions about maximum charging current limitation.
- 5. Derating may be needed under low input voltages. Please check the derating curve for more details.
- 6. This protection mechanism is specified for the case the short circuit occurs after the charger is turned on.
- 7. Each model incorporates a MCU-controlled dynamic over voltage protection, which is about 115% of Vboost over Constant Current stage and Constant Voltage stage whereas 115% of Vfloat over Float stage.
- 8. The battery charger is considered as an independent unit, but the final equipment still need to re-confirm that the whole system complies with the EMC directives. For guidance on how to perform these EMC tests, please refer to "EMI testing of component power supplies." (as available on https://www.meanwell.com//Upload/PDF/EMI\_statement\_en.pdf)
- 9. The ambient temperature derating of 3.5°C/1000m with fanless models and of 5°C/1000m with fan models for operating altitude higher than 2000m(6500ft).

#### 1. Charging Curve

- \* This series provides a 3 stage charging. The default curve is programmable, whereas other pre-defined curves can be activated by the means of the DIP switch; please refer to the table below and the Mechanical Specification.
- \*\* To accommodate the parameters of the charging curve, SBP-001, the smart battery charging programmer designed by MEAN WELL, and a personal computer are needed. Please contact MEAN WELL for details.
- O Default 3 stage charging curve

© Suitable for lead-acid batteries (flooded, Gel and AGM) and Li-ion batteries (lithium iron and lithium manganese).
